

Company Earnings Results 2019–2026: findings, method and data card

Fliar Research · released October 2026 · licence CC BY-NC 4.0

How this dataset was acquired. Every row comes from the [Radar API](#), Fliar's company-data API and MCP server. Radar reads business news continuously and extracts each reported earnings result into structured fields: company, period, fiscal year, currency, revenue, net income, earnings per share, growth and whether the result beat or missed expectations. It links the company to its website in a database of five million companies. This release covers results first reported between January 2019 and June 2026. It runs that output through a reproducible cleaning pipeline: repeated reports of the same result are merged into one row, forecasts and previews are dropped, and each figure is checked against the sentence it was read from. Each row names the article it was read from (`news_source` , `news_url`) and quotes the sentence (`news_excerpt`). The full, continuously updated event history, including guidance and every reporting article, is available through `POST /v1/companies/events` ([reference](#)) or the `get_company_events` MCP tool.

This file is a 25% sample: 56,464 of 225,779 earnings results. It keeps every record for a fixed subset of companies. The subset is chosen by a hash, so it stays the same from one release to the next. The findings and tables below were computed on the **full** data. For the rest, the withheld fields and monthly updates, [get a Radar API key \(docs\)](#). Each row's `fliar_profile_url` opens the company's full profile on Fliar.

Key findings

1. **225,779 earnings results for 33,900 companies, reported in the news between January 2019 and June 2026.** 60,163 are full-year results, 142,897 quarterly and 22,719 half-year.
2. **35,956 results say how they compared with analyst expectations: 62% beat, 27% missed and 11% were in line.**
3. **Coverage is led by United States (79,283 results), India (45,650) and Canada (20,556),** with 152 countries in all.
4. **Median reported full-year revenue growth** (results with US\$100M+ revenue): fiscal 2019 +7.0%, fiscal 2020 +3.7%, fiscal 2021 +16.3%, fiscal 2022 +17.0%, fiscal 2023 +10.0%, fiscal 2024 +7.0%, fiscal 2025 +7.8%.
5. **28% of quarterly results with a net-income figure were losses,** from 20% (2026) to 37% (2020) by year.
6. **83% of results carry a revenue or profit figure that was found again in the reporting sentence;** 3.7% had a figure blanked because it failed the check.

Earnings results by report year and period (2026 = Jan-Jun)

Beat, miss or in line versus expectations

Top 12 countries by results

Results by report year and period type

Full data, by the year the result was first reported.

Report year	Q1	Q2	Q3	Q4	Half-year	Annual	All	Companies	With beat/miss

Environmental services	275	108	\$522.7M	\$8.9M	4.1%	27.7%	+11.0%

Method

- Extraction.** Radar's pipeline reads each earnings article and extracts structured fields, including the source sentence.
- Scope.** Results linked to a company website and first reported between 2019-01-01 and 2026-06-30. Sentences that only preview or forecast a result (for example "is expected to report", "analysts expect") with no reported figure are dropped, as are records without any revenue, net-income or EPS figure.
- Periods.** Period labels are normalised to FY, H1, H2 and Q1–Q4. When the fiscal year is not stated it is read from the period text, else from the report date (a full-year, Q4 or H2 result reported in January–June belongs to the previous year).
- Deduplication.** All reports of the same company, fiscal year and period are one row. The row keeps the record with the widest coverage, then the most figures, then the earliest report. `report_date` is the earliest report; `news_mentions` counts the reporting articles.
- Amount check.** Revenue and net income are compared with every money figure in the source sentence (tolerance 0.6–1.7×). A figure is blanked when the sentence talks about that metric and gives figures with a scale word ("million", "crore") but none matches, or matches only after a power-of-ten shift (crore/lakh or million/billion slips); when it exceeds a ceiling (revenue US\$700B a year, US\$400B a half-year, US\$200B a quarter); when net income is more than five times revenue or less than a millionth of it; or when a very large revenue (over US\$20B a year, US\$10B a half-year, US\$5B a quarter) is not corroborated by another result of the same company within 0.4–2.5×. EPS above 100,000 and growth above 1,000% are blanked.
- Outlooks and market figures.** Sentences about outlook, guidance, consensus estimates, annualised run-rates, market size or combined industry revenue are dropped even when they contain a reported figure.
- Currency.** A "\$" figure for a company in Canada, Australia, New Zealand, Singapore, Hong Kong, Chile, Mexico, Colombia, Argentina or Taiwan is read in the local currency unless the sentence says US dollars; rupee figures of Pakistani,

Sri Lankan and Nepali companies use the local rupee; crore/lakh figures of Indian companies are INR; a "USD" label with no dollar in the sentence for a non-US company is cleared. US\$ columns use one fixed rate per currency (approximate 2024 averages); currencies without a stable rate get no US\$ figure.

8. **Normalisation.** Country names are unified (USA / US / United States → United States). Company names and sectors come from Fliar's company index where the website is known, otherwise from the article.

9. **News columns.** The excerpt is the earliest reporting sentence that names no data provider. Source and URL come from that article when it can be retrieved.

10. **Sample.** Each company key is ranked by `sha1(key)`. Keys are taken in rank order until the file holds max(25%, 5,000) rows (capped at 100,000).

11. **Profile links.** Links are built from Fliar's company index and checked against it. A row whose company has no public profile has an empty link.

Columns

Column	Description
result_id	stable 12-character ID of the result (company, fiscal year, period)
company_name	company name
company_domain	company website domain (the join key for the API)
country	company country (normalised)
sector	industry label
period_type	Annual, Half-year, Q1, Q2, Q3 or Q4
fiscal_year	company's fiscal year of the period
period	FY, H1, H2, Q1, Q2, Q3 or Q4
report_date	date of the earliest news report of the result (YYYY-MM-DD)
currency	reporting currency of <code>revenue</code> , <code>net_income</code> and <code>eps</code> (ISO 4217)
revenue	revenue for the period, in <code>currency</code>
net_income	net profit (negative = loss) for the period, in <code>currency</code>
eps	earnings per share, in <code>currency</code>
revenue_growth_pct	reported year-on-year revenue growth, %
beat_or_miss	Beat / Miss / In-line versus analyst expectations, when reported
revenue_usd	revenue converted to US\$
net_income_usd	net income converted to US\$
amount_status	<code>verified</code> (figure found in the excerpt), <code>unchecked</code> (excerpt has no comparable figure) or <code>failed_check</code> (a figure was blanked)
news_mentions	number of distinct articles that reported this result
news_source	publisher of the article the result was read from (website domain)
news_url	link to that article
news_excerpt	the sentence the result was extracted from (up to 300 characters)
fliar_profile_url	full company profile on Fliar (financials, funding, team, news)

Available only through the [Radar API](#): revenue and EPS guidance; operating income and EBITDA; net-income growth; every article that reported each result; results reported after June 2026 and the monthly refresh; the rest of the companies; company profile, financials, team and contacts.

Limitations

- Derived from news: results that were never reported are missing, and coverage is stronger for large, listed and English-reported companies.
- Figures are as reported. Some articles quote adjusted or segment figures, or profit before tax where net income was expected.
- Company-to-website links are automatic; a small share of results may be attached to the wrong company website.
- US\$ conversions use one fixed rate per currency, so they are for comparison, not exact.
- A few records still mix currencies inside one result (for example net income in local currency labelled US\$).
- `beat_or_miss` is only present when the article said so.
- `news_source` and `news_url` are blank when the article could not be retrieved at release time (some article-store nodes were offline).
- 2026 covers January to June only.
