

Open Company Database (5M companies, 2026): findings, method and data card

Fliar Research · released October 2026 · licence CC BY-NC 4.0

How this dataset was acquired. Every row comes from the [Radar API](#), Fliar's company-data API and MCP server. Radar builds its company database by merging public company registries, company websites, business news and job postings into one record per company, keyed by the company's website domain. Each record is classified into a sector, industry and business model by Radar's own models and carries headquarters location, founding year, funding status and size. This release keeps the firmographic core of the five million companies that have both a name and a website: one row per domain, with country names normalised and founding years checked. The full records, with financials, funding, people and technology, are available through `POST /v1/companies/profile` ([reference](#)) or the `get_company` MCP tool.

This file is a 2% sample: 100,000 of 4,863,273 companies. It keeps every record for a fixed subset of domains. The subset is chosen by a hash, so it stays the same from one release to the next. The findings and tables below were computed on the **full** data. For the rest, the withheld fields and monthly updates, [get a Radar API key \(docs\)](#). Each row's `fliar_profile_url` opens the company's full profile on Fliar.

Key findings

1. **4,863,273 companies with a working website.** 3,233,643 (66%) have a known country, spread over 228 countries; 65% have a founding year.
2. **The United States holds 34% of companies with a known country**, followed by India (10.6%), United Kingdom (10.1%), Canada (4.6%), Germany (3.6%).
3. **A young population.** The median founding year is 2013; 45% of dated companies were founded in 2015 or later and 80% in 2000 or later.
4. **9.0% have raised outside funding.** 35% are recorded as unfunded, 7.4% as acquired, 1.7% as public and 8.4% as closed.
5. **Business Services is the largest sector** (16% of classified companies), ahead of Consumer and Real Estate and Construction.
6. **Funding is concentrated in tech sectors.** Life Sciences (38%), High Tech (23%), Fintech (20%) have the highest funded shares among the 30 largest sectors, against 9% overall.

Companies by country (top 15)

Companies by founding year, 1950-2026

Share funded in the 20 largest sectors

Companies by country (top 50)

Full data. Shares are of companies with a known country.

Companies by employee band

922,013 companies (19%) have an employee band.

Employees	Companies	Share of companies with a band	Median founded	Funded	Public	US share	Top sector
1-10	196,905	21.4%	2014	34.4%	2.5%	42.2%	Enterprise Applications
11-50	346,502	37.6%	2006	22.0%	1.7%	54.0%	Business Services
51-200	231,424	25.1%	2000	18.6%	3.4%	50.4%	Business Services
201-500	71,620	7.8%	1997	22.5%	7.9%	42.8%	Business Services
501-1000	30,608	3.3%	1994	26.9%	13.5%	37.9%	Business Services
1001-5000	32,974	3.6%	1992	32.3%	22.2%	33.8%	Healthcare
5001-10000	5,663	0.6%	1988	40.8%	32.7%	30.6%	Healthcare
10000+	6,317	0.7%	1983	48.8%	42.3%	29.8%	Financial Services

Method

1. **Scope.** Every company in Radar's database with a name and a website, as of October 2026.
2. **One row per domain.** Domains are lowercased with the scheme, `www.` and any path removed. When several records share a domain, the most complete one (founding year, sector, country, city, status, size) is kept.
3. **Country.** Country names are normalised (for example "england, united kingdom", "uk" and "dubai united arab emirates" become "United Kingdom" / "United Arab Emirates"). Values that are not a country, such as state names or codes, are blank.
4. **Founding year.** Years before 1800 or after 2026 are blank.
5. **Labels.** Sector is the first practice area and industry the first listed industry; business model keeps up to three tags. Status "Closed" is a company recorded as shut down.
6. **Removed.** Companies whose name or domain names a data provider, and names containing a phone number, are dropped. No revenue, funding amounts, investors, people, contacts, descriptions or technology fields are published.
7. **Sample.** Each domain key is ranked by `sha1(key)` . Keys are taken in rank order until the file holds `max(25%, 5,000)` rows (capped at 100,000).

8. **Profile links.** Links are built from Fliar's company index and checked against it. A row whose company has no public profile has an empty link.

Columns

Column	Description
company_name	company name
company_domain	company website domain (the join key for the API)
country	country of the headquarters (normalised English name; blank when unknown)
region	state / region
city	city
founded_year	year founded (1800–2026; blank when unknown)
sector	Fliar sector label (first practice area)
industry	industry (first listed)
business_model	up to three business-model tags, pipe-separated ("
status	company status / latest stage (Unfunded, Seed, Series A ... Public, Acquired, Closed)
is_funded	True when the company is known to have raised outside funding
employees_range	employee-count band (blank when unknown)
web_rank_bucket	popularity bucket of the website in a global web ranking (Top 1K ... Top 50M; blank when unranked)
fliar_profile_url	full company profile on Fliar (financials, funding, team, news)

Available only through the [Radar API](#): revenue and financial statements; funding totals, rounds and investors; people, founders and contacts; website technology stack; company descriptions, products and news; the other 4.9 million companies and the monthly refresh.

Limitations

- The database leans toward companies with an online presence and toward English-speaking markets; it is not a census of all firms.
- Country is unknown for about a third of companies, and city for a larger share; they are blank, not guessed.
- Status and funding flags are only as current as the last update of each record; "Unfunded" means no funding is recorded.
- Recent founding years are under-counted, because new companies enter the database with a lag.
- Employee bands are available for about one company in five.
- This file is a 2% sample (capped at 100,000 rows); the tables above use all five million companies.
